

T150

When your home is near particularly wet areas, such as lakes or swamps, it can be subject to problems like discoloration in the water. The discoloration is called “tannins” and is essentially organic matter in the water that’s causing it to have a strange color, odor, or taste.

The solution to this problem is the Origins T 150 Tannin Removal. Through the removal of tannins via anion exchange resins, your home’s water color, odor, and taste will improve.

Exclusive ceramic core valve by Aerus Origins™

Features

- Uses advanced metering technology, making the unit less expensive to operate
- Full digital controller with large LED display is in command through all stages of treatment, adjusting in response to changes in water usage
- Calendar override can be set regenerate on specific dates
- Components are constructed from materials that withstand corrosion and wear

Consumer Benefits

- Removes discoloration caused by tannins from water supply
- Improves the clarity and taste of drinking water
